

Software Requirement Specification (SRS)

of

E-Gram Panchayat

Company's Name:- Kamadgiri Software Solutions Pvt Ltd Chitrakoot

Project Manager's Name:- Er. Drishti Singh

Team Leader Name:- Er. Pradeep Kumar Yadav

Project Co-ordinator's Name:- Er. Satyam Mishra

1) Introduction: -

The major goal of this project is to improve the delivery of citizen services in the village by computerizing applications for gram panchayat services. Gram panchayat is a decentralized institution that manages applications and provides information about gram panchayat services. The suggested system will allow users to submit applications for various services and track their progress. The suggested system E-Services for E-Gram Panchayat develops a web application with the goal of providing government information about services or schemes, and public users can apply for services using an online application. Admin and staff will manage the application for approval and creation of the scheme.

2) Objective:-

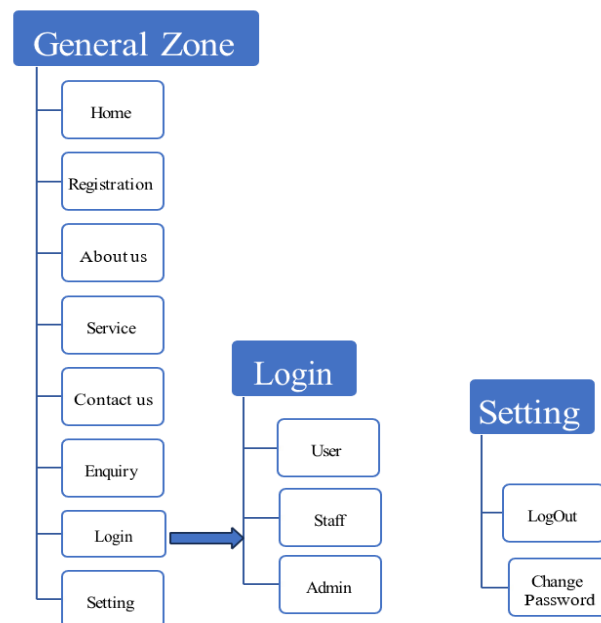

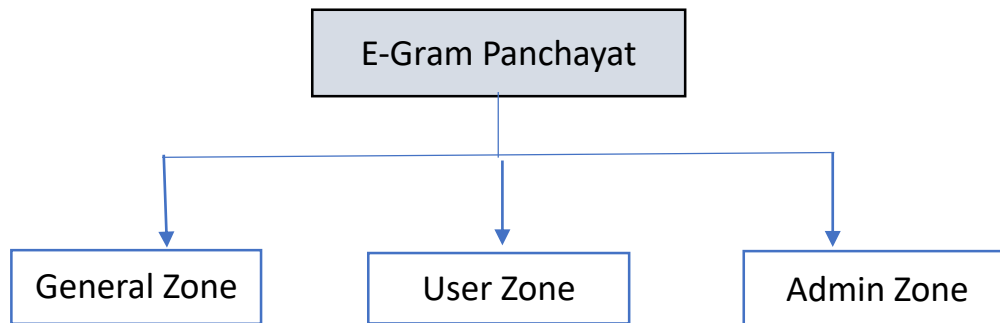

- Villages will get the information about government services and related documents digitally from gram panchayat.
- To provide the list of benefits of different schemes.
- To provide anytime, anywhere access.
- The Transparency of communication between gram panchayat and service users.
- To complain by the villagers.

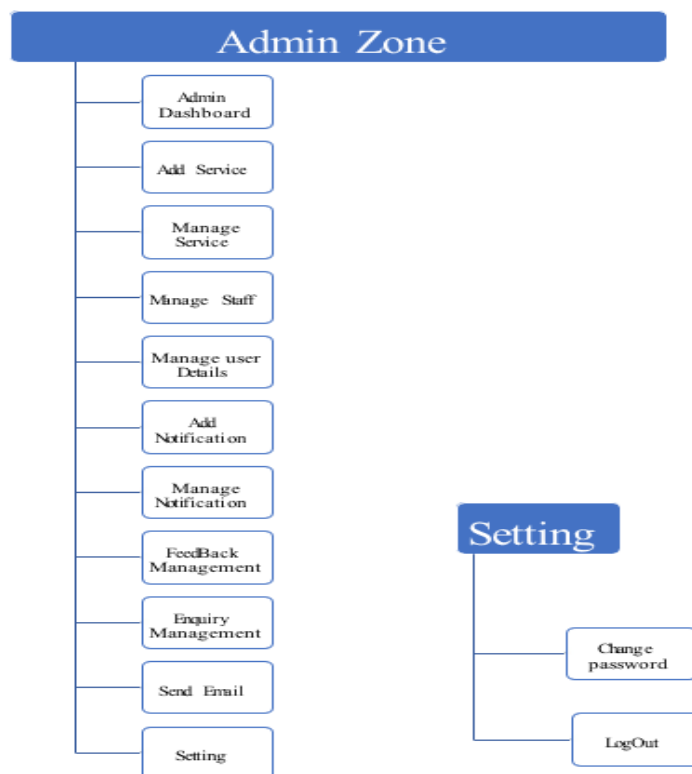

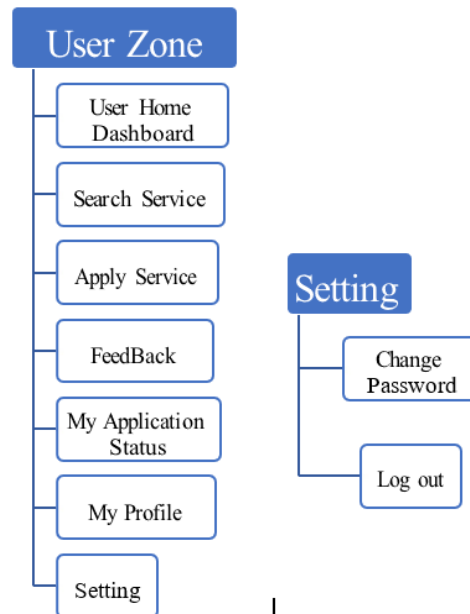

- To feedback from the villagers.
- Villages & gramsevak work under and get information on their account .
- This is to reduce the time of villagers who visits the panchayat office frequently to get the information about scheme /services

3) Modules

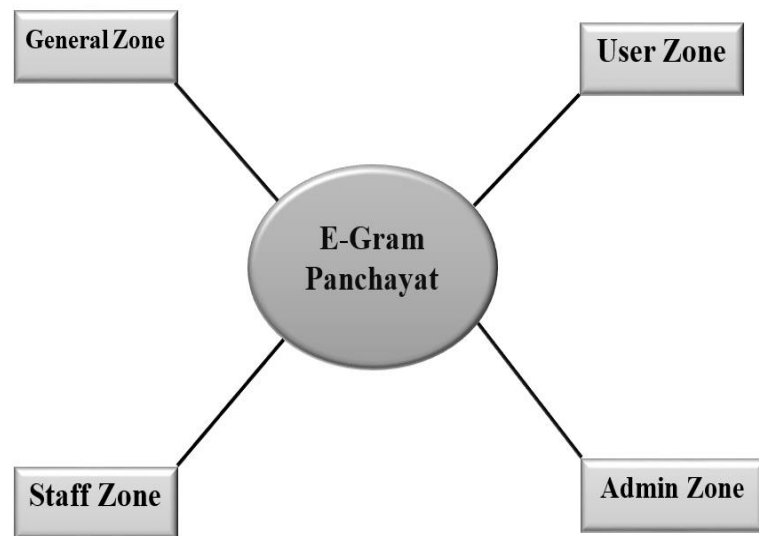

1.	Home page (General Zone)
2.	About us
3.	Registration (Beneficiary)
4.	Contact Us
5.	Enquiry
6.	Login As (Beneficiary, Admin)
7.	Beneficiary Home Dashboard
8.	Search Services
9.	Apply Services
10.	Feedback
11.	My Application Status
12.	My profile
13.	Change Password
14.	Logout
15.	View Services
16.	Admin Dashboard
17.	Add Services
18.	Manage Beneficiary Details
19.	Add Notification
20.	Manage Notification
21.	Manage Services
22.	Manage Feedback
23.	Change Password
24.	Send Email
25.	Logout

4) Architecture of E-Gram Panchayat

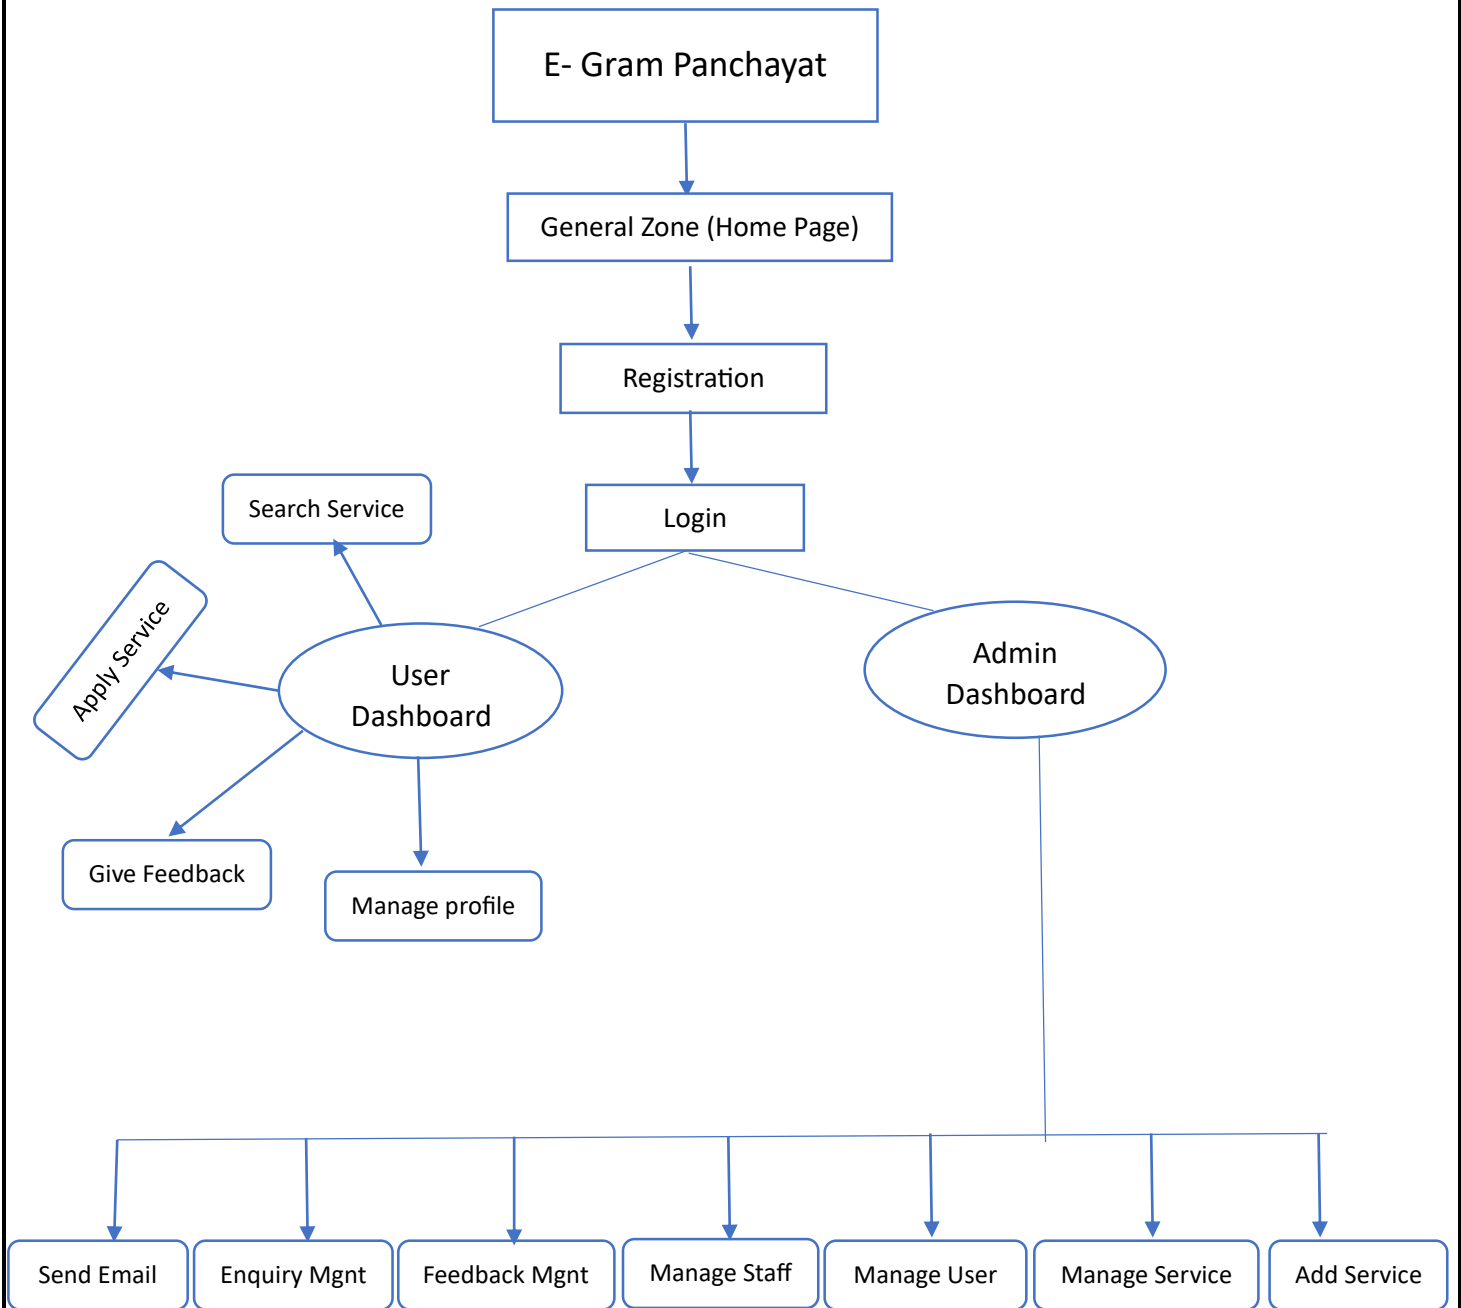

5) 0 Level DFD

6) 1 Level DFD

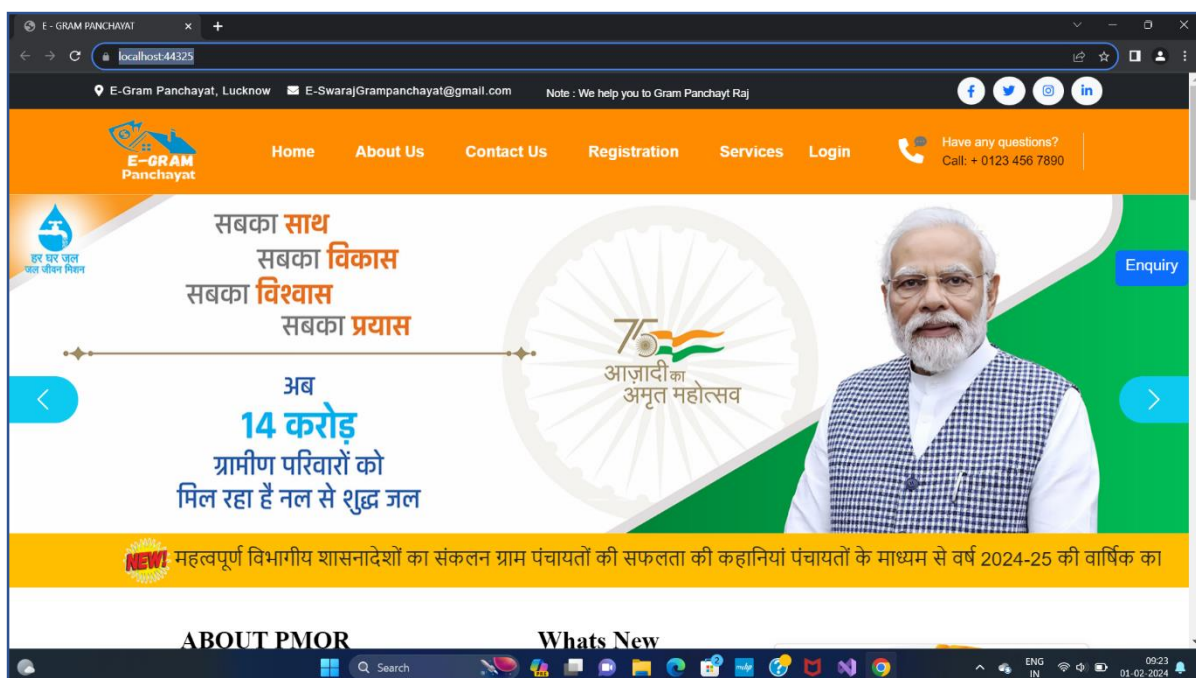

7) Tools & Technologies Used:-

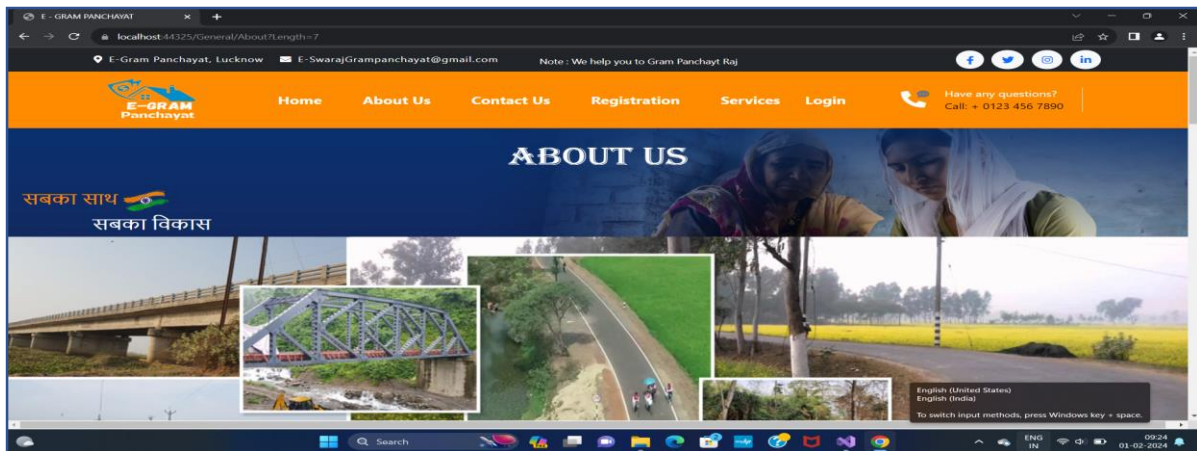

- i) **IDE:-**
Visual Studio 2022
- ii) **Database Management Tool:-**
Sql Server Management Studio 2019
- iii) **Technology & Framework:-**
.NET MVC Framework
- iv) **Programming Language:-**
C#
- v) **Database:-**
MSSQL

This page will be in the General zone: -

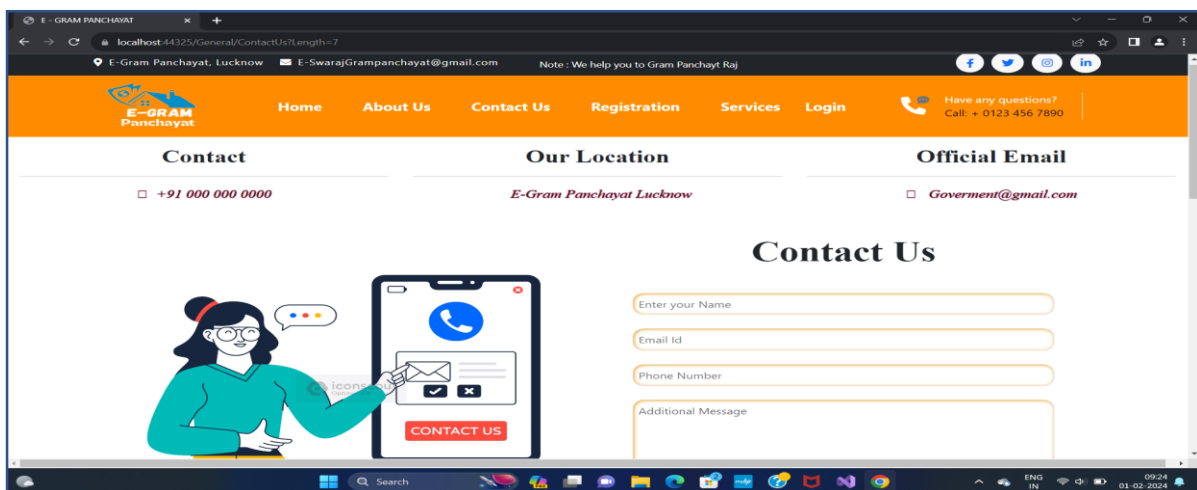

1. Home

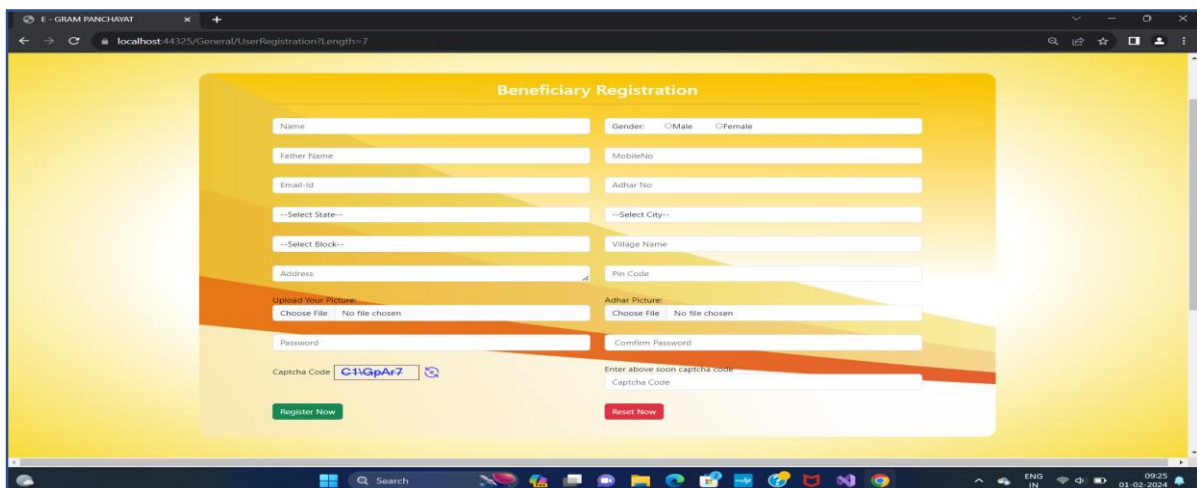

2. About Us

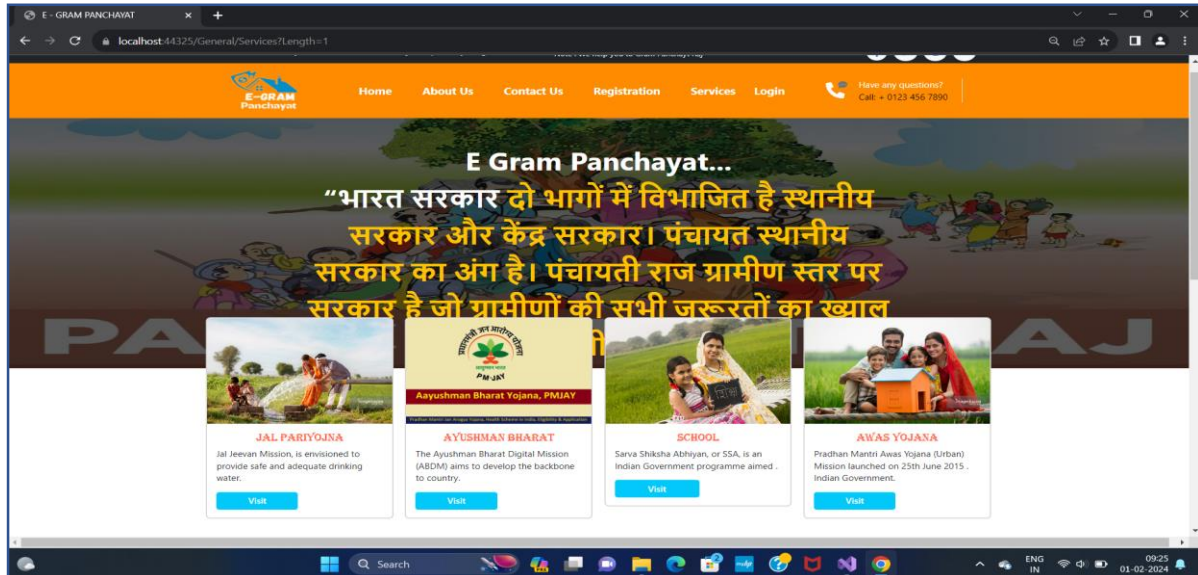

3. Contact Us

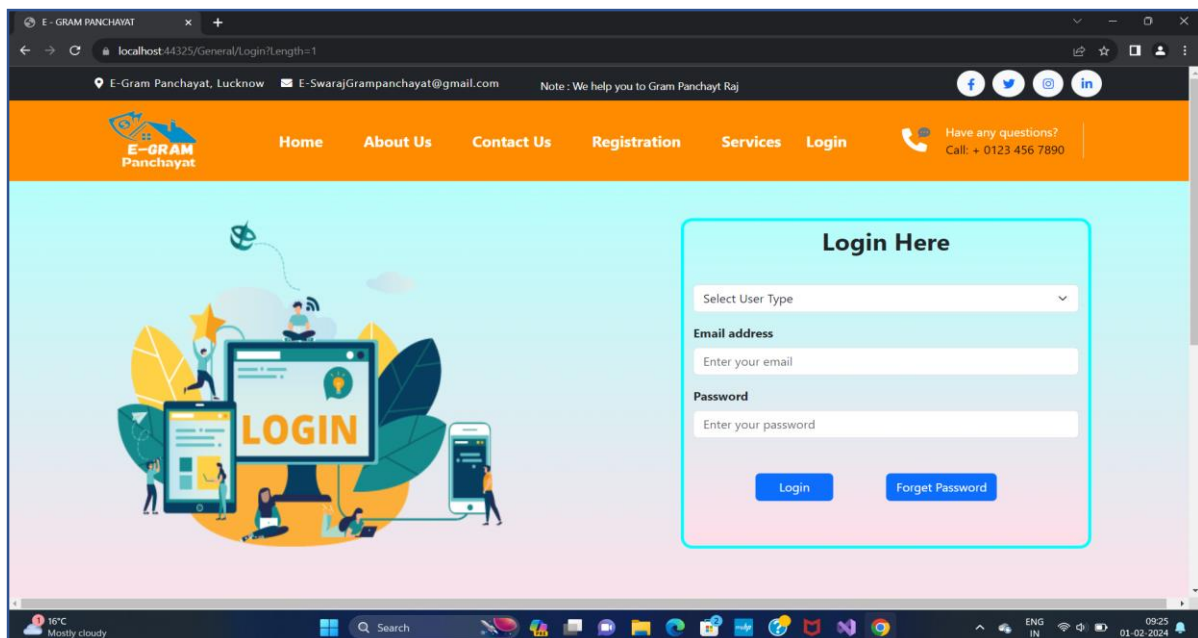

4. Registration

5. Services

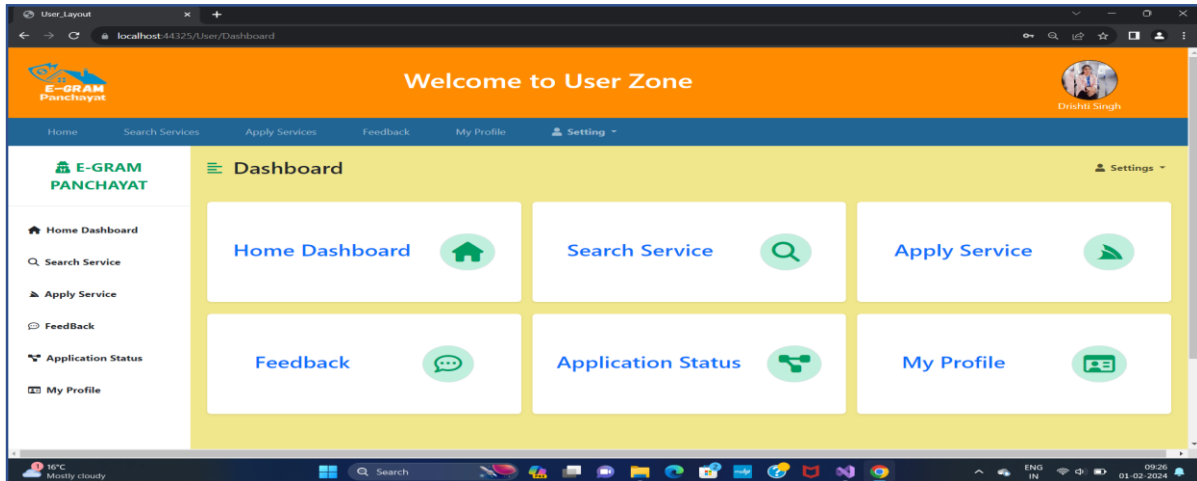

6. Login

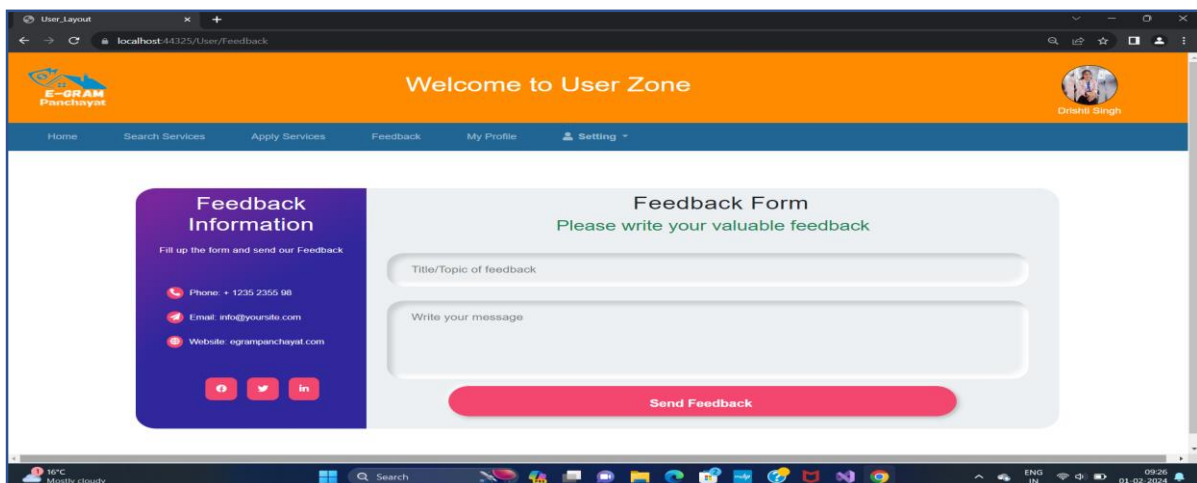

This page will be in the User zone: -

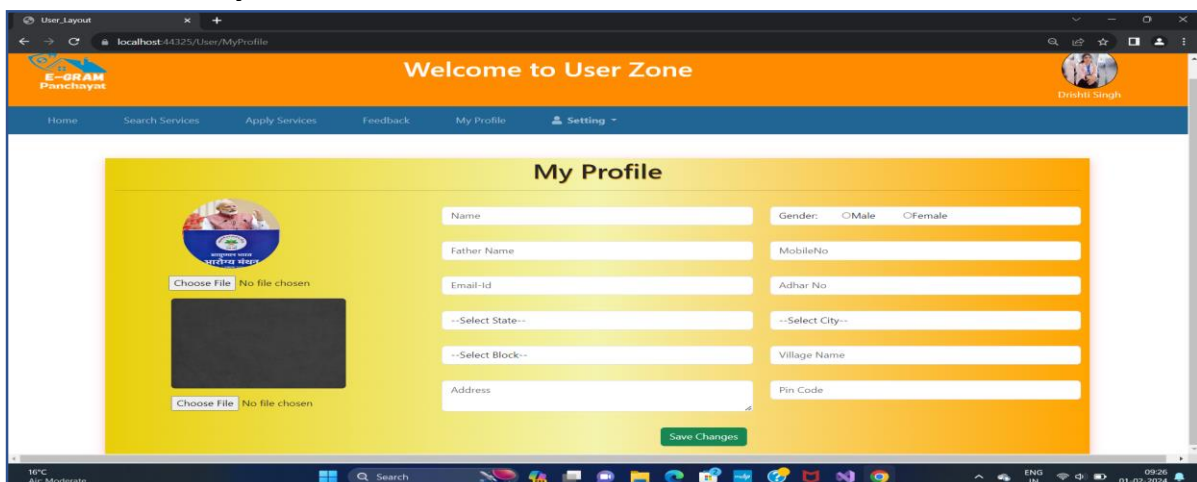

1. Dashboard

2. Feedback

3. My Profile

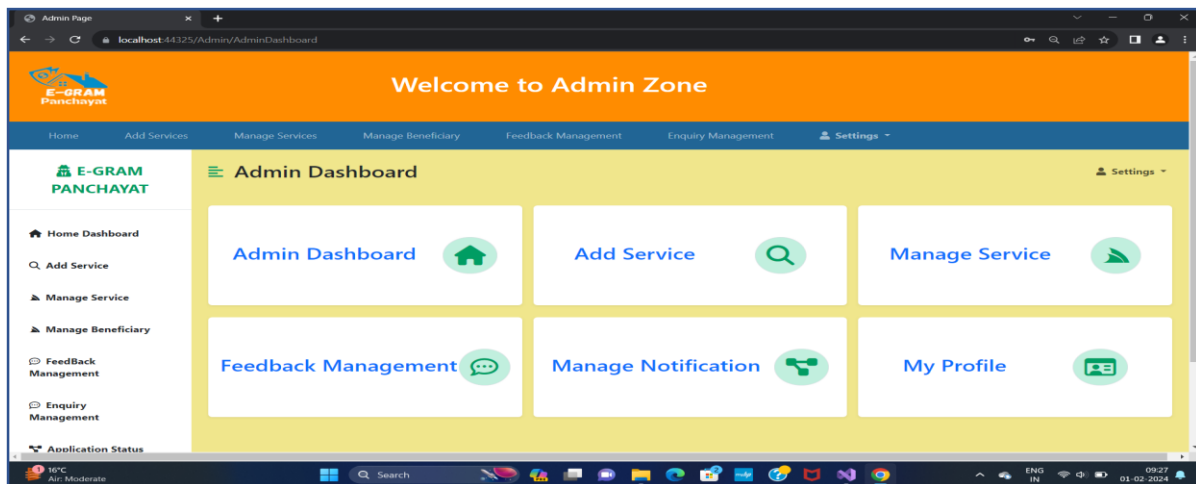

4. Change Password

5. View Services

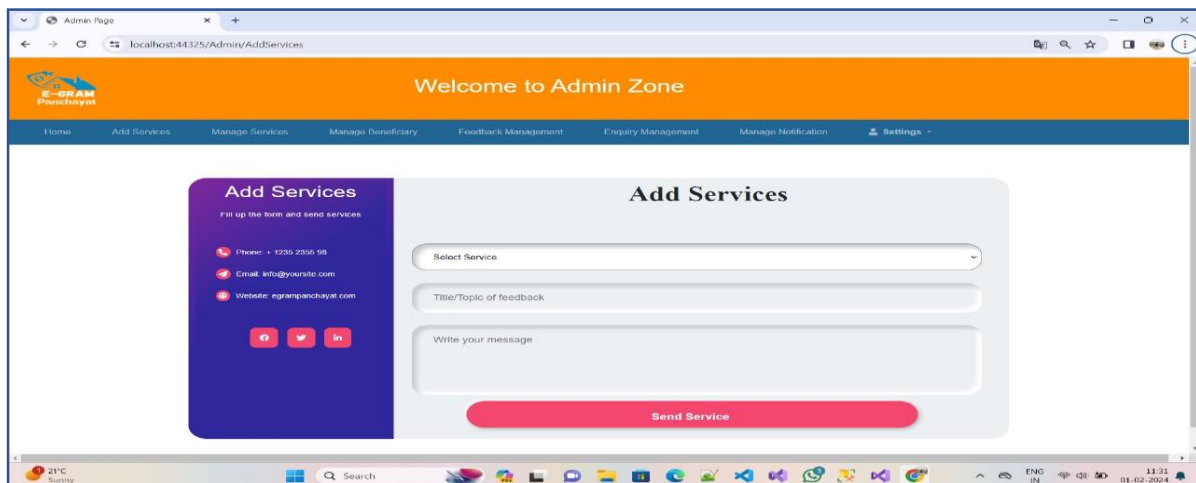

6. Apply Services

This page will be in the Admin zone: -

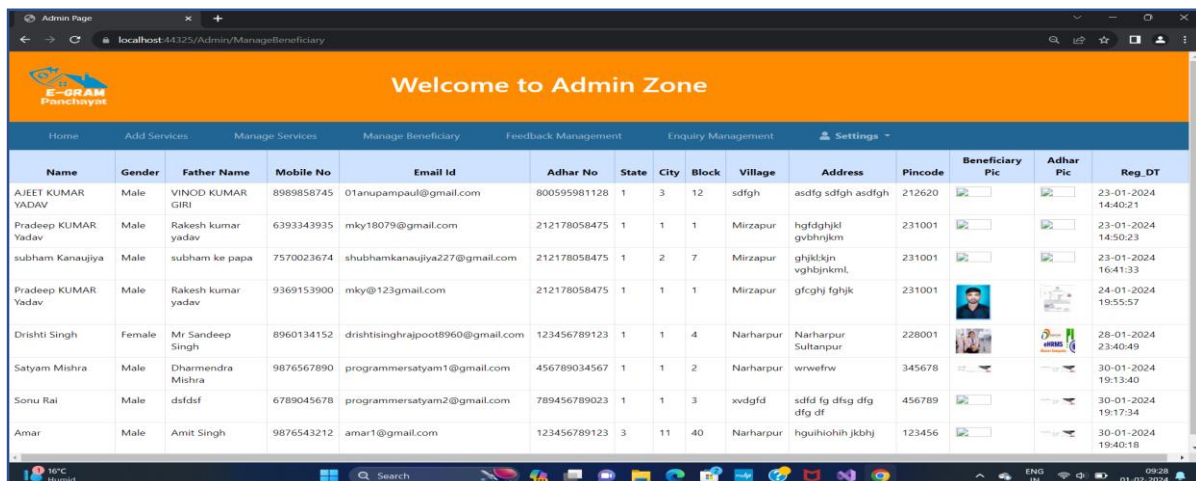

1. Admin Dashboard

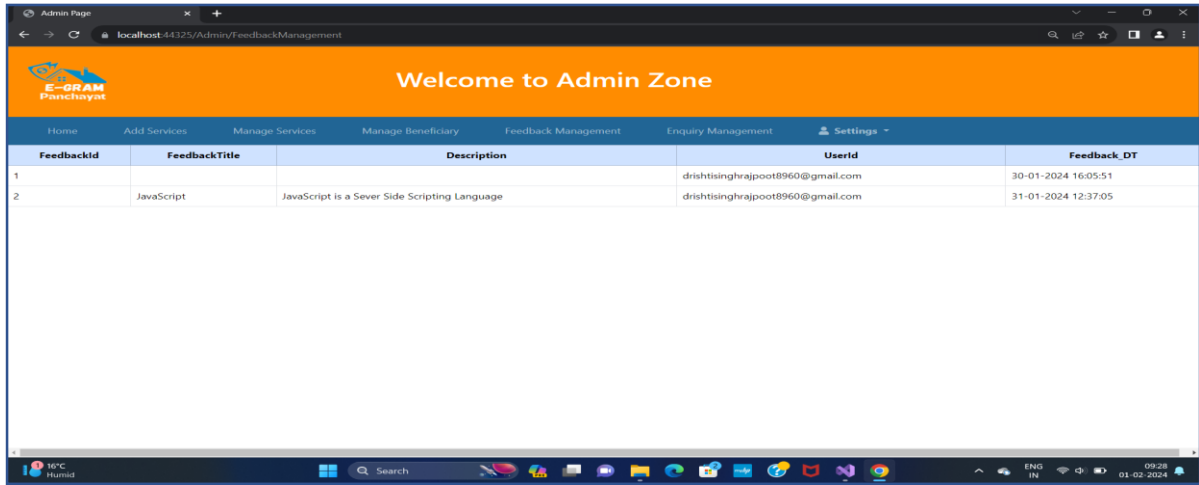

2. Add Services

3. Manage Beneficiary

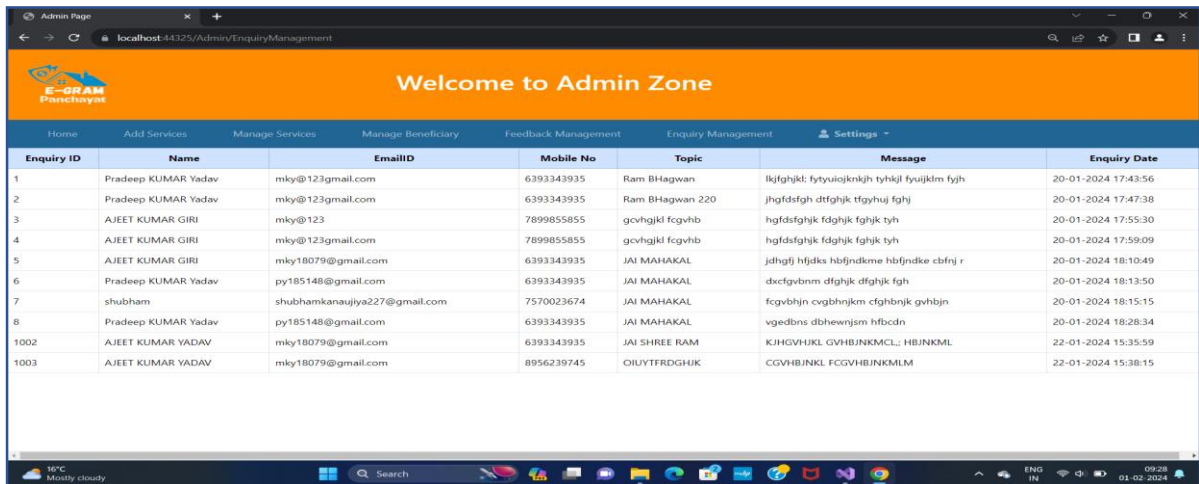

4. Manage Feedback

Team Members and their Roles

SNO.	Name	Job Role	Description
1.	Drishti Singh	Software Developer	Designer/Programmer
2.	Pradeep Yadav	Software Developer	Designer/Programmer
3.	Satyam Singh	Software Developer	Designer/Programmer
4.	Prnaw Kesharwani	Software Developer	Designer/Programmer
5.	Vivek Singh	Software Developer	Designer/Programmer
6.	Abhishek Kumar	Software Developer	Designer/Programmer
7.	Anuj Tiwari	Software Developer	Designer
8.	Sudhanshu	Software Developer	Designer

8) Summary of architecture :

General Zone:

Home:- It should contain the name and logo ,light weight slider ,menu bar ,Header site title ,News & Notification ,Social media icon and enquiry popup.

Register: - In this page user can register themselves online.

This page contains following attributes:

Name ,Father's Name ,Gender ,DOB ,Current Address, Contact no, Email id ,Profile Pic ,Enter Captcha Code ,password ,confirm password, The login id will be email id of user.

Login:- This page is used by the user and provider for login into their zone.It should contain following properties:

UserId,Password,forget password,new user Sign up here.

Change Password:- This page user can change your password .It should contain following properties:

Old Password,New Password and Confirm password

User:

Home:- This page will work as a dashboard.

Search Services:- In this page user can search all services which provided by the government of india.

Apply Services:- In this page user can apply all services which provides by the government of india in rural area/gram panchayat.

My application status:- In this page user can check our application status.That is valid application or not .

My Profile:- In this page user can see our all detail related to us and edit information.Like name,mobile no,email etc.

Logout:- In this page user can logout from website.

Officer/Admin:

Home:- This page will work as a dashboard.

Login:- This page is used by the admin and provider for login into their zone. It should contain following properties:-

AdminId, password, forget password, new admin sign up here.

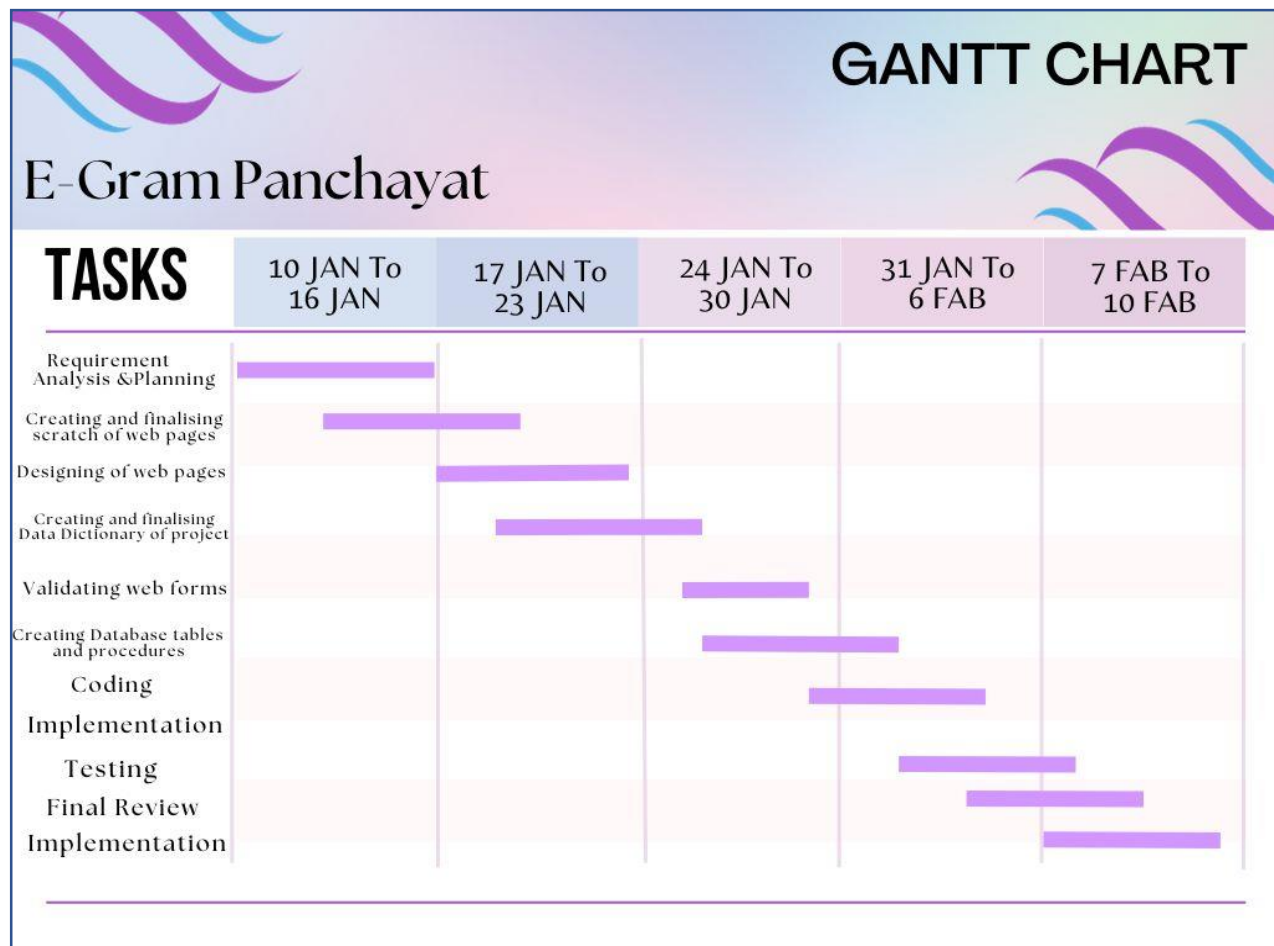

Create Services:- In this page admin can create one or many services for user that allow government of india .

Update/Delete Services:- In this page admin can modify or update and delete services which is expire or not approved by the government of india.

Update application status:- In this page admin can modify or update user or farmer details .

Logout:- In this page admin can logout from website to secure our website

Grantt Chart

Conclusion:

This web based application will be helpful to the villagers of that village; it will bring transparency, accountability, and efficiency in administration. Document and their related record will be available on this application. It helps to make administration more accountable as well as more transparent. The above survey and proposed system will help the Gram panchayat system to work efficiently. This system provides ID and password for the villager. Account history provides information about the services that are previously submitted by the villagers. This will help to minimize corruption in the system, and also save the effort and time of common man and government officers.

Future Scope:

This system has been designed keeping in mind the requirements of gram panchayat staff and enables the admin and staff of panchayat to make entries in the database about villagers, personal details, and their related services. This system also provides him the authority to manipulate his account. We can add much more feature in the system i.e., alert system, receive notification to user and gram panchayat staff about some action, we can provide a transaction system in which all the money related work handled will save time and will reduce corruption. By using this system data collected from different gram panchayat will be helpful for implementing different schemes and will help in natural calamities and data can be useful in other fields.
